Upgrade for the future

One point of contact

SiccaDania focuses on delivering the best possible solution for our individual customers. The equipment is designed in close cooperation with customers, ensuring an efficient and customised solution that suits customers' applications.

Time is limited in your busy daily life and we recognise that. That is why "One Point of Contact" is not just a buzz word to us. You should only have to get in touch once to get all your needs covered from design to manufacturing, installation, commissioning, service and aftermarket.

Our aftermarket experts can provide you with expertise and know-how about issues relating to optimisation and upgrades. Our dedicated and experienced team is focused and ready to upgrade existing dryers and evaporators irrespective of the initial provider of the plant.

Our experts are ready

SiccaDania's equipment specialists, project managers and site service operators help you determine the scope of your need, whether it is customised service or maintenance of your equipment.

We can advise you on the optimal solutions based on our expertise in process design, engineering, fabrication, and installation.

We can customise a solution fitted to your specific needs. Contact our experts for upgrade opportunities.

Why should you upgrade?

Capacity increase

Old equipment can represent bottlenecks for current production. With SiccaDania's process design capabilities and expertise, we upgrade capacity on old dryers by exchanging components.

Plant Emission Control

With an increase in government regulations regarding emissions, this puts a strain on the older process equipment. SiccaDania advises solutions through adding or replacing equipment featuring improved emission control.

Energy Optimisation

Energy is expensive and heavily regulated. SiccaDania can reduce energy cost in a the drying operation by 10-25% offering a pay-back time of 1-3 years on the investment.

Process Air Dehumidification

SiccaDania offers complete dehumidification systems. A new system can benefit many dryers with advantages such as a higher capacity and a more uniform end-product quality.

We can support you with a full range of competences to investigate, analyse, re-design, automate for an optimal solution

Spare Parts

You have access to SiccaDania specialists in equipment performance and design, and access your needed spare parts. SiccaDania can quickly supply you with the needed spare parts. All spare parts carry warranty.

24/7 conversion

Many evaporators and dryers are operating 18-20 hours per day, followed by a shutdown for cleaning purposes. Without optimal performance on evaporators and dryers, you are not optimising your investment. With a SiccaDania 24/7 conversion the dryer can run all day every day thereby optimising production time.

Replacement and repairs

SiccaDania extends our service and support philosophy with intelligent "adoption" of existing equipment. This enables us to provide you and your personnel with online support and the necessary technical/technological backup.

Safety upgrade

Many machines were designed and installed at a time where other safety regulations applied. This equipment has the potential to cause unintended production stops or worse – a work injury. SiccaDania offers safety evaluations and equipment upgrades to meet current safety regulations to ensure a safe plant for many years to come.
